Certificate

External: Cybersecurity - Ground Rules

Rui Carneiro Faria
(GID: Z0044S5U)

successfully completed the above mentioned course on 03-APR-2023 (duration: 00:40 hours).

Cybersecurity is gaining ever more critical importance in our daily lives. This is also the case for many companies, including Siemens. Cybercriminals are constantly trying to commit malicious activities on digital systems and networks with the intention of stealing sensitive corporate information or personal data and generating profit. This can have far reaching and lasting negative consequences.

The intention of this training is to help make you more aware of and/or refresh your knowledge on general cybercriminal tactics. The training focuses on the following topics:

- Why is cybersecurity important?
- Wi-Fi networks
- Phishing
- Social engineering
- Safe workplace
- Mobile devices
- Secure exchange with external parties
- How to deal with threats

Natalia Oropeza
Global Chief Cybersecurity Officer, Chief Diversity Officer
